

Why RE-INVENT the WHEELS?

Motivity™ has guided autonomous robots 24X7, over millions of kilometers, through factories, labs, hospitals, offices, hotels and even warehouses. And it does not stop there... *Motivity* autonomy means your robot can integrate with the rest of the enterprise, send itself to its charging station, interact appropriately with people, follow traffic rules, respond to sensor conditions, position-stamp sensor data, re-map its space and even decide which sensors are most reliable at the moment! And it's all from MobileRobots Inc, the company that's been providing robot systems and software to engineers and researchers since 1995. Contact us today for an online demo of *Motivity* autonomy for your AGVs and service robots.

Making AUTONOMY easier!
