Correction to “Studies of the Frequency-Agile Relativistic Magnetron”

Tianming Li, Jiayin Li, and Biao Hu

In [13], none of the references were cited in the text. Listed below are the sentences where these references should have been cited.

- 1) Simple structure, low requirement to voltage and quality of electron beam, abilities of high peak and average power always make relativistic magnetron attractive [1]–[6].
- 2) In contrast to other high power microwave sources, the frequency agile is another important highlight of relativistic magnetron [7].
- 3) It was firstly reported by Physics International Company in 1995 [8].
- 4) In recent years, some new methods such as magnetic priming, electric priming and transparent cathode, are provided and partly research through PIC simulation [9].
- 5) James Benford pointed out the tunable relativistic magnetron is commercially available in the future [10].
- 6) There are 3 types of modes in rising-sun resonant system [11].
- 7) Meanwhile, the 6 resonator system is popular in common relativistic magnetron [12].
