

Wanted: Telecommunications Revolutionaries

And everyone who answers this call will be in on the making of telecommunications history. We've already developed the GTD-5 EAX...the shot heard 'round the business world.

But if we're to continue leading the charge, we need brilliant revolutionaries. Like the ones you'll find here. Dedicated, inquisitive people. They not only know how to run with an idea, but how to work shoulder-to-shoulder with their fellow revolutionaries.

Systems Design

We are currently seeking experienced professionals with a BS or advanced degree in Engineering, Computer Science, strong communication and team-playing skills. Specific responsibilities involved and experience required includes:

- Network level architecture design and communication network systems planning. Requires 8-10 years experience with ISDN architecture development, knowledge of CCITT standards, switching/transmission systems planning and open system interconnection.
- Fiber technology systems design background. Requires 5+ years experience with fiber technology systems design. SYTRAN or SONEC experience a plus, with MUX/DEMUX concentration.
- Operation system support. Responsible for maintenance, operation and provisioning of telephone operating companies supporting the remote maintenance control system. Minimum 5 years telephony experience in an operations system support environment.
- Microprocessor architecture systems. Requires a minimum of 5 years experience with 80386 or 68020 bit slice processors. Integration and interface design background with I/O and memory subsystems mandatory.

If this describes you, send us your resume. Or give us a call. Just say "I want to enlist." GTE Communication Systems, Human Resources Dept. 0535, c/o 3221 N. 16th St., #106, Phoenix, AZ 85016. An Equal Opportunity Employer M/F/H.

**Communication
Systems**

We're leading the revolution.

MILCOM 87

"CRISIS COMMUNICATIONS: THE PROMISE AND REALITY"

October 19-22, 1987

McLean, Virginia

Near Washington, DC, in McLean, Virginia, the McLean Hilton will be the site of the 6th Annual MILCOM Conference, jointly sponsored by IEEE, AFCEA and DoD.

The theme of the 1987 Conference is "Crisis Communications: The Promise and Reality." A large audience is expected, providing a unique opportunity for extensive technical exchange among key members of the Military Communications Command.

McLean Hilton

General Chairman: Alan J. Roberts
Senior Vice President & General Manager Washington C3I Division
The Mitre Corporation

Vice Chairman: Stanley E. Harrison
President & Chief Operating Officer
The BDM Corporation

Vice Chairman: RADM Lawrence Layman
Director, Space, Command and Control
Office of the Chief of Naval Operations

LUNCHEON SPEAKERS:

October 20:

LTG Thurman D. Rogers, USA
Assistant Chief of Staff for Information
Management

October 21:

VADM Paul F. McCarthy, USN
Director, Research, Development & Acquisition
Office of the Chief of Naval Operations

October 22:

MajGen John T. Stihl, USAF
Commander, Air Force
Communications Command

BANQUET SPEAKER: October 21

Mr. Norman R. Augustine, President & Chief Operating Officer, Martin Marietta Corporation

PANELS:

October 20:

"Interoperability in a Stressed
Environment" (Classified)
BrigGen Wayne E. Schramm USAF

October 21:

"Perspectives on New Directions in
Communications Research"
Dr. Gordon K. Soper, DCA

October 22:

"Keeping Information Secure: Policies,
Threats, Technologies"
GEN Richard G. Stilwell, USA (Ret.)

For further information or a copy of the Advance Program, please call Leo M. Keane at (703) 883-6993.

TO REGISTER FOR CLASSIFIED SESSIONS,
CALL 703/883-7900 TO OBTAIN FORM.
DEADLINE FOR SUBMITTING CLEARANCE FORM IS 9/11/87.

1987 IEEE MILITARY COMMUNICATIONS CONFERENCE - OCTOBER 19-22, 1987
DoD Sponsored Classified Sessions

Attendance is restricted to individuals possessing a current and valid Government granted Security Clearance of at least FINAL SECRET or its reciprocal equivalence, and a need for access to classified information.

FORMS RECEIVED AFTER September 11, 1987 WILL NOT BE ACCEPTED. Hand-carried clearances and registrations will not be accepted.

Attendance by U.S. Contractor personnel is governed by the provisions of the Department of Defense Industrial Security Manual for Safeguarding Classified Information. (DoD 5220.22-M) (ISM)

NOTE PENALTY FOR MISREPRESENTATION: Title 18, United States Code 1001, makes it a criminal offense, punishable by a maximum of 5 years imprisonment, \$10,000 fine, or both, to make a false statement of representation to any Department or Agency of the United States as to any matter within the jurisdiction of any Department or Agency of the United States. This includes any statement knowingly made by employer or employee herein which is found to be incorrect, incomplete, or misleading in any important particular.

ALL PARTS OF THIS FORM MUST BE COMPLETED IN TYPE OR PRINT.

An acknowledgment will be mailed upon receipt of the completed Security Clearance Form.

IEEE GLOBAL TELECOMMUNICATIONS CONFERENCE

NOVEMBER 28 - DECEMBER 1, 1988

DIPLOMAT HOTEL
HOLLYWOOD, FLORIDA

“COMMUNICATIONS FOR THE INFORMATION AGE” CALL FOR PAPERS

Authors,

You are cordially invited to submit an original paper for consideration for GLOBECOM '88 to be held from November 28, 1988, to December 1, 1988, at the Diplomat Hotel in Hollywood, Florida. Authors are encouraged to submit papers addressing the conference theme “*Communications for the Information Age*” and the mini-theme “*The Dawning of Broadband Communications*.” The conference will be structured to follow three tracks of general interest. These tracks along with examples of topics covered under each track are as follows:

I. Services and Trials

- ISDN
- Broadband
- Intelligent Networks
- Private Networks
- Voice/Data/Image Applications
- Voice and Storage Processing
- New Terminal Capabilities
- Office Automation

II. Architecture and Standards

- Open Architectures
- Data Networks
- ISDN Evolution
- Advances in Communications Protocols
- Programming Capabilities for Networks
- Distributed Network Architectures
- Customer Network Management
- Quality Assurance
- Operations

III. Techniques and Technologies

- Optical Communications
- Advances in Switching Technology
- LAN, MAN, WAN
- Portable Communications
- Communications Software
- Coding and Modulation Techniques
- Expert Systems
- VLSI for Communications

Schedule and Instructions

|-------------------------------------|-----------------|
| • Complete Manuscript Due | April 18, 1988 |
| • Notification of Acceptance Mailed | July 11, 1988 |
| • Camera-Ready Copies Due | August 22, 1988 |

The title page must include the author's name, complete return address, telephone and/or telex number and abstract (100 words). Also, please suggest a track number (e.g., I, II or III) for your paper and indicate if the paper addresses the conference mini-theme. All other pages should bear the title of the paper and the author's name. Manuscript must be limited to 3,000 words in English. Page charges will be assessed for camera-ready copies exceeding five pages. Six double-spaced copies in English must be sent to the GLOBECOM '88 Technical Program Chairman. Also, one copy must be sent to the appropriate regional representative shown below. Please make plans to participate in GLOBECOM '88.

Europe, Africa & Middle East

CALL FOR PAPER

The 4th IEEE International Workshop on Telematics (IWT)

Sponsored by:

IEEE Communications Society
Societe des Electriciens et Electroniciens (SEE)
Direction Generale des Telecommunications (DGT)

OBJECTIVE

The workshop is an opportunity for researchers to present latest results and discuss the evolution of telematic and message handling services for existing networks and evolving ISDN and broadband ISDN.

SCOPE

The areas of interest include:

- Facilities and protocols for telematic services and message handling services
- Document architecture (ODA, Multi-media) and manipulation facilities
- PC communication and electronic mail
- Integration of telematic services and message handling services in the network (ISDN, Value Added Network)
- New telematic services (wideband, teleconferencing)
- Security aspects in telematic services
- Experimentations and implementation plans for services

WORKSHOP SCHEDULE

Date: MAY 1–4, 1988

Location: Hotel MERCURE
Caen, France

AUTHOR SCHEDULE

October 15, 1987: An abstract of 500-1000 words must be received

INSTRUCTION

The accepted abstract will be distributed as work note. Attendance will be limited to 100; selection will be based on the proposed contribution. The title page will indicate the authors name, company, full address, telephone number, possibly telex and facsimile numbers.

SUBMISSION

Mail 2 copies of the abstract to:

Dr. C. N. Judice
Bell Communications Research
435 South St., Room 2A-287
Morristown, NJ 07960
USA

Call for papers

MILCOM 88

1988 IEEE Military Communications Conference
October 23-26, 1988
Irvine, California

21st Century Military Communications—What's Possible?

You are invited to submit a classified or unclassified paper for the 1988 IEEE Military Communications Conference on one or more of the following topics.

Emerging challenges

Threats: needs requirements, doctrine
Strategic: theater, tactical, defense-wide
Survivability: security, reliability, maintainability, interoperability, cost

Emerging architectural concepts

Systems, subsystems, networks
Land, sea, air, satellite, hybrid

Emerging techniques

Spread spectrum, LPI, coding, processing, modeling, protocols, switching, communications theory

Emerging technologies

Antennas, MIMIC/RFLSI, VHSIC/UHSIC, wafer scale integration, GaAs, HEMT, fiber optics, optical processing, optical computing, solid state power, computer communications, software, and AI.

If you intend to submit a paper, or wish to organize a session, please mail the following form by December 1, 1987.

Author's Schedule

Notice of intent due: December 1, 1987
Papers and abstracts due: February 15, 1988
Author notification: May 15, 1988
Camera ready copy due: July 15, 1988

All abstracts must be less than one page, properly approved, and cleared as UNCLASSIFIED. Include name, affiliation address, and phone number for each co-author. All classified papers presented at MILCOM '88 must be releasable at the secret level or below, and must be preapproved by the author's cognizant security release authority. Page charges will be assessed if the camera ready copy exceeds five pages. For additional information on submissions or the conference, contact:

Ralph E. Osborne
MILCOM '88 Executive Assistant
213.535.5885

Address all submissions to:

Dr. Ronald D. Sugar
MILCOM '88 Technical Program Chairman
TRW
One Space Park, 146/1515
Redondo Beach, California 90278

Sponsored by IEEE Communications Society, AFCEA, and DoD.

MILCOM '88 October 23-26, 1988 Irvine, California
1988 IEEE Military Communications Conference

I intend to submit a paper, organize a session on the subject:

Paper/session will be Unclassified Classified Please send Program and registration information

MITRE's Network Center: At the Forefront of Networking Technology.

The Network Center of The MITRE Corporation's C³I Group in Bedford, Massachusetts, has already made a significant impact on networking technology, especially in the areas of broadband networks, interoperability, generic network management tools for multi-vendor environments, and network security. Now, our systems engineering involvement in almost 20 high-level LAN and Wide Area Network projects promises to set the direction for networking and communications technology well into the 21st century.

MITRE's charter is to serve as the C³I Systems Engineer for the U.S. Air Force's Electronic Systems Division. We established The Network Center to be the central resource supporting the design and development of networks used to solve problems in numerous distributed support and C³I systems. Our LAN/Wide Area Network projects apply to such areas as command and control, surveillance and warning, intelligence and logistics. We are solving distributed processing problems using networking technology for communications, laying the groundwork for totally distributed systems based on standard protocols—reliable, secure, flexible, survivable networks and the application of powerful workstations to provide needed capabilities.

One of the center's projects is aimed at the implementation of five networks—each providing base-wide communications for 7,000 to 10,000 subscribers housed in up to 50 buildings. In another project we are proposing and evaluating alternative network architectures and estimating the performance for end-to-end communications for NASA's Space Station. Other activities involve linking large distributed systems to wide area networks; off-loading functionality from DBMS-oriented mainframes to powerful, sophisticated workstations; developing multi-media (voice, data, graphics) networks; defining network and workstation security solutions; and evaluating applicability and performance trade-offs among Arpanet, ISO, and proprietary solutions to network problems.

The Network Center places substantial emphasis on enhancing our reputation on a national level by designing and developing creative solutions that involve concept development, feasibility analysis, prototype development, consultation for integration, as well as guidance for development. The experts who staff the organization work beyond the leading edge of networking technology, with the innovators among network product and workstation vendors, and receive the visibility and recognition that match the importance of their contributions.

Technical Leaders—Networking

We need senior technical people for both the management and the technical ladder to help set the direction in system engineering of network architectures. We work with wide-area and local-area networks, requiring expertise in one or both of these fields. Specific responsibilities will include providing engineering support to the analysis and design of computer communications networks, establishing the trade-offs involved in different networking technologies as applied to specific applications, and defining network architectures which will support analytical and simulation efforts. To qualify, you should have a BS/MS, and at least 10 years of experience. A strong background in communications systems, protocols, software development, and commercially available network architectures is required. Effective management experience in defining tasks, producing products, leading engineers, and satisfying the customer within schedule is essential. Familiarity with state-of-the-art and emerging technologies such as T-1 networking, FDDI, and ISDN is desirable, as is experience in modeling and simulation.

Technical Leaders— Workstation/Distributed Applications

We seek leaders with a recognized technical background who can lead a dynamic team to work on areas addressing the close coupling that exists between LANs and the distributed information system environments they commonly support. Your specific, current responsibilities will involve trade-offs among SUN class vs. Apple Macintosh II vs. IBM/Microsoft environments; the applicability of network windowing concepts and network file system concepts to distributed C³I systems; and the applicability of commercial office automation products to C³I applications. To qualify, you should have a BS/MS and at least 10 years of directly related experience. Excellent interpersonal, communications, and leadership skills are essential.

If interested and qualified, please reply in strictest confidence to: David L. Finnegan, The MITRE Corporation, 4608 Middlesex Turnpike, Bedford, MA 01730. U.S. Citizenship is required for all positions.

For C³I and Civil systems engineering positions at MITRE's Washington, D.C. Center, forward resume to: M. X. Mason, The MITRE Corporation, 7525 Colshire Drive, McLean, VA 22102.

*Real World Solutions
To Real World Problems*

MITRE

An Equal Opportunity Employer M/F

Research and Management Opportunity in Transmission Technology

U.S. Naval Research Laboratory Information Technology Division (GM-15; salary to \$69,976)

The Naval Research Laboratory has a long and distinguished history in the field of RF technology spanning over 60 years, from the development of the first HF transceiver in 1924 to advanced communication capabilities exploiting space assets. Today our Information Technology Division (ITD) is at the forefront of research and development in telecommunication and computer science, providing leadership in a diverse research environment. The ITD needs an innovative manager to plan, guide, and administer research programs as the Head of the Transmission Technology Branch. This Branch is concerned with radiofrequency system engineering, transmission technology investigations, development of state-of-the-art transmission equipment, and research into channel propagation phenomena. Areas of activity include:

- RF Transmission Technology
 - Broadband Antennas
 - Compact Antenna Arrays
 - Ultralinear Amplifiers
- Arctic Communication Investigations
- Advanced Shipboard/Shore Based Instrumentation
- HF Propagation Channel Characterization

The ITD computing facilities include several VAXs, Gould/UNIX, several LISP machines, SUN and ISI workstations, a Butterfly, numerous PCs, access to NRL's CRAY X-MP/24 supercomputer, a CONNECTION machine, and others.

Do You Have

- a strong research interest and background directed toward the improvement of information transmission?
- an expertise in making strong technical presentations?
- a proven ability to market, initiate, and manage research programs?

If so, this position may be for you. Interested applicants should submit a Personal Qualifications Statement (SF-171) or detailed resume. For further information call collect to Ms. Jane Avery at (202) 767-3030.

GO STRAIGHT TO THE GENEVA SUMMIT

5th World Telecommunication Forum, 19-27 October 1987, Geneva (Switzerland)

The legal symposium **87** Geneva 21-23 October 1987

HARMONIZATION OF GLOBAL TELECOMMUNICATIONS SYSTEMS

The Panels:

Global Concerns/Comparative Regulatory Systems/
Enhanced Communications/Television Broadcasting
via Satellite/Transactional Services/WAITC 88:
Issues/Telecommunications Trade & Services

The Legal Symposium will bring together delegates from countries where new national telecommunications policies have been adopted or are under review. It will examine different industry structures and regulatory arrangements focussing on the relationships between them. The sessions will also explore the relevance of new policies emerging in industrialized countries to developing countries.

The Speakers:

Hon. Judge H. Greene (District Court for the District of Columbia, USA), Dr Florian (Secretary of State, FRG), Minister MacDonald (Canada), Minister Moggie (Malaysia), Yukio Okuyama (Director General, MP & T, Japan), J.L. Parapak (INDOSAT) and Robert Somervaille (OTC, Australia) and many other well-known personalities.

Their presentations will reflect the growing worldwide awareness that the current progress in telecommunications owes as much to the lawmaker and the judiciary as to the scientific laboratories of system and equipment manufacturers.

From the IEEE Communications Society in conjunction with the IEEE PRESS . . . INTRODUCING

FRONTIERS IN COMMUNICATIONS

Focused and comprehensive, our new book series provides state-of-the-art coverage on subjects of major importance to professionals in communications and related fields.

Advances in Local Area Networks

Edited by Karl Kümmerle, IBM Research Laboratory, Zurich, Switzerland; John O. Limb, Hewlett Packard Laboratories, Great Britain; and Fouad A. Tobagi, Stanford University. 1987. 616 pages. ISBN-0-87942-217-3.

Local Area Networks (LANs) are evolving rapidly and can take many forms. First generation LANs operating at speeds up to 10 Mb/s are widely deployed in office environments today. Second generation LANs and Metropolitan Area Networks (MANs) operating at about 100 Mb/s are the subject of current standardization efforts and third generation LANs operating in the Gb/s region are the object of current research.

The editors of this book point out that Local Area Networks differ from classical communications channels, in that firstly, the transmission medium is shared by a number of users and, secondly, that at least some of the information is sent in packets containing a destination address. These two properties are also shared by many MANs. LANs and MANs exploit similar concepts, the primary difference being in the geographical coverage provided.

The book provides a description of the most important principles of LANs, and emphasizes the exciting new directions LAN technology is taking.

Contents: Introduction; Evolution of Local Area Networks; Fiber Optics Applied to LANs; Performance; Integrated Traffic; Bridges and Gateways; Software and Applications; Subject Index.

Clothbound Order No. PC02105 List \$56.50 Member \$42.40

Undersea Lightwave Communications

Edited by Peter K. Runge and Patrick R. Trischitta, AT&T Bell Laboratories. 1986. 644 pages. ISBN-0-87942-201-7.

Lightwave systems are being installed on land at a phenomenal pace. Initial considerations might suggest that it would be a relatively easy task to apply terrestrial optical technology to crisscross the world's oceans and seas. This is far from true. The technology necessary for an undersea lightwave communication system is very different from that for terrestrial systems and is very complex and demanding.

The book provides a comprehensive description of the latest worldwide progress in undersea lightwave technology for transoceanic communications systems. It also offers an outlook on future technology options.

Contents: Background; Undersea Lightwave Systems; Undersea Fiber; Undersea Fiber Cables; Undersea Lightwave Repeater Design; Undersea Electrical Components; Undersea Optical Devices; Assuring the Reliability of Undersea Electrical and Optical Devices; Supervisory, Control, and Terminal Equipment; Future Undersea Lightwave Systems; Author and Subject Indexes.

Clothbound Order No. PC01933 List \$60.80 Member \$45.60

Frontiers is a manifestation of IEEE ComSoc's commitment to technical and educational excellence. It is our intention to make each title in the series a most definitive and up-to-date source on its subject. Each *Frontiers* volume is focused on a timely and important topic not fully covered in the literature. Each is designed to serve the information needs of the interdisciplinary audience involved in modern communications.

Definitive sourcebooks for the practicing professional

LANs . . . ISDNs . . . packetized voice and data . . . military communications . . . digital radio . . . regardless of subject—each *Frontiers* volume is a complete, coherent, and up-to-date sourcebook featuring . . .

- a comprehensive introduction to the subject
- lead-in tutorials to aid comprehension and place materials into perspective
- invited papers by "world-class" authors
- bridging and other materials supplied by expert editors
- extensive references and cross-indexing

Thus, each subject comes "full-circle" in a unique, heavily illustrated and handsomely-formatted book.

The first two books in the series are described on this page. We invite you to place your order today and see for yourself why we are so enthusiastic about *Frontiers in Communications*. A convenient order form is provided.

Amos E. Joel, Jr. is Editor of the *Frontiers in Communications* series. A past President of the IEEE Communications Society and a Fellow of the IEEE, Mr. Joel is a widely published and world-renowned authority on communications switching.

Books in the Frontiers series feature an easy-to-read type face and numerous charts, diagrams, photographs and tables. The first two books contain nearly 800 illustrations. Page size is 17cm. by 25cm.

Please send me the *Frontiers in Communications Series* books I have entered below. (Note: Member price applies to first copy only of each title. Additional copies of the same title are at list price.)

First Call for Papers

The 1988 IEEE International Symposium on Information Theory will be held at International Conference Center Kobe in Kobe City, Japan, from Sunday evening, June 19th, 1988 through Friday afternoon, June 24th. Hotel accommodations have been arranged in the vicinity of I.C.C. Kobe, at which the technical sessions will be held. Kobe is easily accessible from Osaka International Airport. The Symposium registration fee will be in the neighborhood of ¥ 30,000. Detailed information on accommodations, travel arrangements, excursions, and the technical program will be included in subsequent mailings.

Papers presenting new results in the following areas are solicited:

- Audio and visual signal processing
- Communication systems
- Complexity
- Cryptography and security
- Data networks
- Detection and estimation
- Distributed information processing
- Error-correcting coding
- Information theory applications
- Multi-user information theory
- Pattern recognition
- Shannon Theory
- Stochastic processes
- Source coding

Both long (40 minutes) and short (20 minutes) papers will be accepted. Long Papers will be reviewed on the basis of a complete manuscript; the deadline for submission of these is November 1st, 1987. Short Papers will be reviewed on the basis of a 500 word summary; the deadline for submission of Short Papers is December 1st, 1987. Either type of submission should be accompanied by an Abstract of no more than 180 words suitable for the Symposium Proceedings, and an indication of the technical area covered. A manuscript submitted as a Long Paper, but which cannot be accommodated in that category, will be considered for acceptance as a Short Paper, unless the author directs otherwise. Acceptance will be by March 15th, 1988. All submitted papers and summaries should be sent in triplicate to one of the Program Co-Chairmen:

Professor Shu Lin
Department of Electrical Engineering
University of Hawaii at Manoa
Holmes Hall 483, 2540 Dole Street
Honolulu, Hawaii 96822
U. S. A.

Professor Suguru Arimoto
Faculty of Engineering Science
Osaka University
Toyonaka, Osaka 560
Japan

A limited number of grants are available for authors of accepted papers whose resources will not enable them to attend the Symposium. Inquiries on other matters related to the Symposium should be addressed to one of the Symposium Co-Chairmen, Professors Daniel J. Costello, Jr. or Toshihiko Namekawa, or to the Chairman for Local Arrangements, Professor Tadao Kasami, at the following addresses:

Professor Daniel J. Costello, Jr.
Department of Electrical Engineering
University of Notre Dame
Notre Dame, IN 46556
U. S. A.

Professor Tadao Kasami
Faculty of Engineering Science
Osaka University
Toyonaka, Osaka 560
Japan

Export. Or you may be missing the boat.

And missing profits.
And missing customers.
And missing out.
Get on board and see how
exporting can open up exciting,
new horizons for you.
You could be competitive over-
seas. And that could make you

even more competitive at home.
Smooth sailing all around.
Find out how by calling the U.S.
and Foreign Commercial Service
at **1-800-343-4300*** Operator 199.
Call today and send your
products out. Then watch your ships come in.

*In Alaska call 1-800-331-1000.

Exporting can do a world of good for your bottom line.

While you're at Telecom in Geneva, send home some tulips via satellite.

We'll show you how to channel

Our stand in Geneva has a live on-screen connection with Holland. Transmitting the minute-by-minute action at the Flower Auction Aalsmeer.

You see the auction clock run. When the price is right, press a button. You'll hear the auctioneer record your bid. The delivery address of your choice is flashed immediately to the auction

hall. And KLM and PTT Post take care of the rest.

A vivid example of the innovative achievements of PTT Telecommunications The Netherlands. Transferring voice, text, image and data to get things done. Thanks to its international network and excellent consultancy and services.

PTT Telecommunications The Netherlands is a world leader in its field.

the flow of business and communications.

This is why so many foreign businesses have subsidiaries in Holland, the gateway to Europe. It has a favourable trading, labour and investment climate, as well as a convenient central location for transport and distribution. And a technologically sophisticated infrastructure providing flexible, market-oriented telecommunications.

You'll see various examples of Holland's modern facilities and services on-screen at our

Telecom stand. Our expert advisers will be happy to discuss your specific requirements and the solutions PTT Telecommunications The Netherlands can provide, or develop for you.

Visit PTT Telecommunications The Netherlands at Telecom Geneva, Hall 4, Stand 4.130, October 20-27, 1987. We look forward to meeting your needs.

Call for Papers

IEEE Network Magazine Special Issue on Communications for Manufacturing

A special issue of IEEE Network Magazine on Communications for Manufacturing is planned for May 1988. The major objectives are to provide an informative overview of the general area of factory and integrated office/factory communication systems and to identify major research and development issues. Papers are solicited in, but not limited to, the following areas:

- Strategic importance of factory and integrated office/factory communications
- Functional requirements for automated manufacturing; e.g. production control, file transfer, real-time scheduling, etc.
- CIM: computer integrated manufacturing perspectives
- Computer Aided Logistics (CAL)
- Processing systems and languages for factory communication and control
- Performance requirements, protocols, and system evaluation
- Standards activities
- VLSI for factory communication
- Transmission technology and media for factory communications
- Research directions/results, including modeling, for factory communications

The editors seek original contributions describing case studies, tutorials, research activities and results, and recent developments in software and hardware relevant to factory and integrated office/factory systems.

Schedule and Instructions

All papers will be refereed. Papers should be limited to twenty double-spaced typewritten pages exclusive of figures. Authors should send four copies of papers to one of the guest editors listed below and should please respect the following dates:

Full paper due: October 15, 1987

Acceptance notification: December 1, 1987

Final paper due: February 1, 1988

MITRE'S VHSIC CENTER

Defining Tomorrow's Best Applications For Today's Newest Technology.

After an intensive, four-year development effort by six of this country's premier microelectronics manufacturing companies, highly advanced Very High Speed Integrated Circuit (VHSIC) devices for demanding military applications are a prototype reality. Now, it is the task of The MITRE Corporation's new VHSIC Technical Center to assist the U.S. Air Force's Electronic Systems Division in evaluating this technology and the resulting devices, as well as determining their potential and optimum use in such vital areas as modern spread-spectrum communications, high resolution airborne radars, and satellite communications.

The professionals of MITRE's VHSIC Center are involved in system analysis, feasibility studies and hands-on signal processing design with VHSIC devices and tools. Working closely with VHSIC contractors, U.S. Air Force personnel, and scientists and engineers throughout the MITRE organization, the Center's staff will evaluate device capabilities and determine limitations, as well as specify the integration of VHSIC devices and technology into C³ systems utilizing state-of-the-art CAE/CAD hardware and software. This significant and diverse involvement with the newest of technologies demands nothing less than the highest level of expertise.

SYSTEMS ENGINEERS

As an essential and highly visible member of the VHSIC Center, your major responsibilities will focus on defining VHSIC applications for radar, communications and imagery systems. Your outstanding communications skills and technical expertise will be put to optimum use as you interface with top Air Force, contractor, and MITRE personnel to create superior systems engineering solutions. To qualify, you must have a BS in Electrical Engineering or Physics (MS or Ph.D. is preferred), plus 10 years of experience in practical systems design. A minimum of 5 years of experience in radar, communications or imagery systems is required; experience with applying military VLSI or VHSIC technology is very desirable.

DEVICE ENGINEERS

You will be responsible for understanding all parameters of VHSIC devices and designing them into specific systems utilizing the Center's CAE/CAD capability. Duties will include evaluating speed and effectiveness of devices, designing new functions that can be implemented with VHSIC devices and implementing prototype processors. To qualify, you must have a BS in Electrical Engineering or Physics (advanced degree is preferred), plus 5-10 years of overall component-oriented design experience. Three or more years of design experience using VHSIC or military VLSI technology is desired. A knowledge of functional partitioning, circuit architecture, packaging, reliability, and cost as they will relate to VHSIC devices is essential.

CAE/CAD SPECIALIST

The overall success of our VHSIC Center will depend largely on your combination of technical expertise and highly-focused experience. You will have principal responsibility for the evaluation, design, development, acquisition, installation and implementation of the Center's new CAE/CAD system. Specifically, you will evaluate available VHSIC CAE/CAD tools, recommend the appropriate system of software/hardware for our technology insertion needs, and implement system utilization. You will also evaluate contractors' CAE/CAD and be involved in software development of new designs for different applications, as well as sample designs, performance analysis, simulation, trade-offs and systems partitioning. To qualify, you must have a BSEE, BSCS or BS in Physics, plus 3-5+ years of CAE/CAD experience, preferably with strong military VLSI or VHSIC involvement. A solid background in software is required, to interface with MITRE's Software Technical Center.

Get On Line With MITRE's Career Menu

If you have a personal computer or terminal with a telephone connection, you can explore MITRE's opportunities on line by calling our Career Menu. Dial (617) 271-8000, and use the login name, 'mitre', followed by a carriage return. It's that simple, that fast. No resumes. No waiting. Direct to MITRE. And complete confidentiality.

*300 baud,
Trans. \$
Receive*

If interested and qualified, please reply in strictest confidence to: David H. Gentes, The MITRE Corporation, 65009 Middlesex Turnpike, Bedford, MA 01730. U.S. Citizenship is required for all positions.

For C³ and Civil systems engineering positions at MITRE's Washington, D.C. Center, forward resume to: M.X. Mason, The MITRE Corporation, 7525 Colshire Drive, McLean, VA 22102.

*Real World Solutions
To Real World Problems.*

MITRE

An equal opportunity employer.

Last November in Phoenix, Northern Telecom and Mountain Bell introduced the first Integrated Services Digital Network application in the U.S.

This past March, participants in the 1987 IEEE International Switching Symposium saw the Northern Telecom DMS-100* ISDN switch that is providing ISDN 2B+D basic rate access for Mountain Bell's ISDN trial.

Our experts presented 17 important technical papers on ISDN network-based business services, packet services evolution, and network architecture. We also demonstrated personal computer networking and multimedia (voice/data/image) conferencing.

Since ISS '87, the future of ISDN looks brighter than ever. We continue to help advance these evolving standards toward the day when sharing voice, data, text and graphics will be as easy as using a phone.
