

The Dimension Book

Kensuke Hatano
University of Tokyo

Abstract

The Dimension Book is a novel interface in the form of a book, which can dynamically reflect various changes in the physical world's environment into the virtual world. This work functions as media in which data as well as the environment itself can be treated as information.

Kensuke Hatano is a graduate student in the Department of Information Physics and Computing at the University of Tokyo. His research interests include interactive computer graphics and virtual reality. Hatano has a BS in mathematical engineering and Information Physics from the University of Tokyo.
