

IEEE TRANSACTIONS ON ULTRASONICS, FERROELECTRICS, AND FREQUENCY CONTROL

A PUBLICATION OF THE IEEE ULTRASONICS, FERROELECTRICS, AND FREQUENCY CONTROL SOCIETY

SEPTEMBER 2005

VOLUME 52

NUMBER 9

ITUCER

(ISSN 0885-3010)

Information for Contributors	1427
Multimedia Example	1432
Call for Papers: "Special Issue on Special Issue on Modeling, Optimization and Design of Acoustic Devices"	1433
Call for Papers: 15 th IEEE International Symposium on the Applications of Ferroelectrics	1434

PAPERS

Frequency Control

Multistage Chemical Etching for High-Precision Frequency Adjustment in Ultrahigh-Frequency Fundamental Quartz Resonators	<i>H. Iwata</i> 1435
High Q-factor Microwave Fabry-Perot Resonator With Distributed Bragg Reflectors	<i>J. Krupka, A. Cwikla, M. Mrozowski, R. N. Clarke, and M. E. Tobar</i> 1443
Evaluation of Kalman Filtering for Network Time Keeping	<i>A. Bletsas</i> 1452
Quantum 1/f Effect in Resonant Biochemical Piezoelectric and MEMS Sensors	<i>P. H. Handel, A. Tournier, and B. Henning</i> 1461
Limitations on the Use of the Power-Law Form of S _y (f) to Compute Allan Variance	<i>F. Thomson, S. Asmar, and K. Oudrhiri</i> 1468

Medical Ultrasound

Computer Simulation of Forward Wave Propagation in Soft Tissue	<i>T. Varslot and G. Taraldsen</i> 1473
Piezoelectric Contrast Materials for Ultrasound Imaging	<i>B. C. Towe</i> 1483
Building Three-Dimensional Images Using a Time-Reversal Chaotic Cavity	<i>G. Montaldo, D. Palacio, M. Tanter, and M. Fink</i> 1489
An Integrated Semicompliant Balloon Ultrasound Catheter for Quantitative Feedback and Image Guidance During Stent Deployment	<i>C. D. Choi, J. Savage, D. N. Stephens, and M. O'Donnell</i> 1498
Spatial and Temporal Aberrator Stability for Real-Time Adaptive Imaging	<i>J. J. Dahl, M. S. Soo, and G. E. Trahey</i> 1504
Transcranial Ultrasound Focus Reconstruction with Phase and Amplitude Correction ..	<i>J. White, G. T. Clement, and K. Hynynen</i> 1518
HIFU Focusing Efficiency and a Twin Annular Array Source for Prostate Treatment	<i>T. Christopher</i> 1523

Physical Acoustics

Transient Response Analysis of a Rosen-Type Piezoelectric Transformer and Its Applications	<i>K.-T. Chang</i> 1534
Measurement of Spatial Cross Sections of Ultrasound Pressure Fields by Optical Scanning Means	<i>M. Klann and C. Koch</i> 1546

Sensors, NDE, and Industrial Applications

Characterization of Digital Waveforms Using Thermodynamic Analogs: Applications to Detection of Materials Defects	M. S. Hughes, J. N. Marsh, C. S. Hall, D. Savéry, G. M. Lanza, and S. A. Wickline	1555
On the Sensing and Tuning of Progressive Structural Vibration Waves	A. Minikes, R. Gabay, I. Bucher, and M. Feldman	1565
Thermoacoustic Tomography with Integrating Area and Line Detectors	P. Burgholzer, C. Hofer, G. Paltauf, M. Haltmeier, and O. Scherzer	1577

Surface Acoustic Waves

A Microscopic View on Acustomigration	T. Hesjedal, J. Mohanty, F. Kubat, W. Ruile, and L. M. Reindl	1584
---	---	------

Transducers and Transducers Materials

In-plane P-SV Waves from a Piezoelectric Strip Actuator: Exact Versus Effective Boundary Condition Solutions	A. Boström and B. Zhang	1594
Piezoelectric Two-Layer Stacks of Cellular Polypropylene Ferroelectrets: Transducer Response at Audio and Ultrasound Frequencies	M. Wegener, S. Bergweiler, W. Wirges, A. Pucher, E. Tuncer, and R. Gerhard-Multhaupt	1601

CORRESPONDENCE

Characterization of High-Frequency, Single-Element Focused Transducers with Wire Target and Hydrophone	B. Huang and K. K. Shung	1608
A Noncontact Method for Detecting Acoustic Emission Using a Microwave Doppler Radar Motion Detector	G. C. Smith	1613

Acustomigration Under the Microscope

The cover image is an artistic rendering of the damaging effect of a standing wavefield on a thin aluminum film. Stress induced material transport in SAW devices, so-called acustomigration, is a prominent failure mechanism, especially in high-power applications. We present the quantitative calculation of the stress in the metal film employing a P-matrix model in combination with the Partial Wave Method. This approach provides the flexibility to determine the stress at any given point in a SAW device.

We used scanning probe microscopy techniques to study acustomigration of metal structures *in-situ*, i.e. during the high-power loading of the device. Scanning Acoustic Force Microscopy (SAFM) allows for the simultaneous measurement of the acoustic wavefield and the topography with submicron lateral resolution.

Image courtesy of Thorsten Hesjedal of the Paul Drude Institute for Solid-State Electronics in Berlin, Germany. Special thanks for the artwork goes to Roman Engel-Herbert and Tonia Stengelin. See article on page 1584.
