Attention Authors of the IEEE Transactions on Electromagnetic Compatibility (T-EMC)

Prof. Ing. Antonio Orlandi, Editor-in-Chief
IEEE Transactions on Electromagnetic Compatibility

IEEE and our Transactions on EMC are continuing to support your efforts to publish papers of higher and higher technical and scientific relevance and of great impact on our EMC community.

Would you like to get more exposure to your data-based research? Do you have valuable datasets that require long-term storage and accessibility? Would reviewers value centralized access to your datasets to verify article conclusions?

If you answered YES to any of these questions, IEEE DataPort is ready to help you meet these needs. IEEE DataPort (https://ieee-dataport.org) is a new IEEE data repository that is now available to all IEEE members, IEEE authors, IEEE Societies, and the global technical community. IEEE DataPort adds value for all those in the global research community that have data storage needs, require access to datasets, and/or desire to initiate or participate in Data Challenges and Competitions.

To support our T-EMC authors and facilitate the submittal of datasets related to scholarly articles, the Transactions on EMC joins the IEEE Phase 1 of implementation of a trial that is enabling authors of several publications (T-EMC included) to have direct access to IEEE DataPort and the opportunity to store data as part of the article submission process.

All authors, whether IEEE members or not, can deposit their datasets up to 2TB in size into IEEE DataPort. You will receive a unique and consistent DOI (Digital Object Identifier) immediately upon loading the dataset. This DOI can then be used in your manuscript file to refer readers to the related dataset. Not only could this strengthen an article, it can also support research reproducibility. In addition, authors will get increased exposure to their data and research and perhaps will receive more citations.

Below is the new data prompt that appears in the T-EMC article submission process:

Do you have DATA associated with your article?

o **Yes**

o **No**

IEEE DataPort

IEEE authors may upload up to 2TB of data related to their article to IEEE DataPort at no cost (or at low cost if the dataset must be Open Access).

Once your data is uploaded to IEEE DataPort, a DOI (Digital Object Identifier) will be provided immediately. The IEEE DataPort DOI should be entered in the DOI field below and should be included in your main manuscript file. Providing data with your article can strengthen your submission and make your research more easily reproducible.

You can upload your data files to IEEE DataPort at any time (before, during or after the publication process).

The About IEEE DataPort page (link to: https://ieee-dataport.org/about-ieee-dataport) provides instructions and answers to commonly asked questions.

Use this link to access IEEE DataPort (link to: https://ieee-dataport.org). When you have finished uploading your data/dataset, provide the DOI and Title.

What is the IEEE DataPort DOI for your data? (For data loaded to IEEE DataPort, the DOI displays on the right hand side of your dataset page.)

DOI:

What is the title of your data as entered into IEEE DataPort?

Title:

If you have any questions or suggestions regarding IEEE DataPort or the trial, please contact Melissa Handa at melissa.handa@ieee.org. Any feedback you have would also be welcome as we want to provide the highest level of service to our authors.

In the hope that this new opportunity would be of your interest and usefulness, all the best! **EMC**
