No Overlength Page Charges for One Page of References

THE IEEE TRANSACTIONS ON ANTENNAS AND PROPAGATION (TAP) has changed its editorial policy by allowing one free page of references, i.e. one page that does not incur overlength page charges, provided that such a page is used only for references.

The reasons behind such a change are that some authors do not provide a careful analysis of prior contributions, give reference to relevant works, and clarify the novelty of their work in relation to what has already been published. In fact, it is a matter of fairness to give citations to all relevant works that represent the foundation of a specific contribution. Focus should be given to papers that are "...directly relevant to the subject matter..." (PSPB Manual 8.2.1.B.11) and authors should provide a clear argument to justify what the merits of their proposed publication are with respect to (1) very recent publications and (2) directly and relevant articles.

Such careful analysis should always be present in a well written paper and this concept was emphasized in the January 2017 editorial: "...authors should write their articles by making comparisons with a sufficient number of relevant papers (i.e. closely related to what is being proposed/discussed/analyzed) that are among the most recently published. In this way, authors should make the argument that there is novelty compared to the state of the art and thus hopefully convince the reviewer(s) about the merits of their submitted manuscripts. In fact, it is the authors' responsibility to (1) clearly state what they think the novelty is; (2) provide evidence that the novelty is not incremental; and (3), add appropriate statements in the manuscript (such as in the Introduction section and/or other appropriate sections..."

Another reason to provide a free page of references is to avoid the drastic reduction in the number of references that occurs frequently when authors are asked to reduce a manuscript from a full paper to a communication. Authors

should not fear between allocating space for technical content and space for references.

Overlength (OPC) page charges will be computed according to the following algorithm:

- 1) For Regular papers that have at least one full page of references, and the paper totals 9+ pages, the author receives the 9th page free of OPC (fees apply beginning with the 10th page onward). For example,
 - a) A 9-page paper with one full page of references = \$0 OPC.
 - b) A 10-page paper with one full page of references incurs \$200.00 in OPC.
- 2) For regular papers that have less than one full page of references, and the paper totals 9+ pages, OPC incur from the 9th page onward. For example,
 - a) A 9-page paper with less than one full page of references = \$200 OPC.
 - b) A 10-page paper with less than one full page of references \$400.00 in OPC.
- 3) For communications that have at least one full column of references, and the communication exceeds 4+ pages, the author receives the 5th page free of OPC (fees apply beginning with the 6th page onward). For example,
 - a) A 5-page paper with at least one full column references = \$0 OPC.
 - b) A 6-page paper with at least one full column incurs \$200.00 in OPC.
- 4) For communications that have less than one full column and the communication exceeds 4+ pages, the author incurs OPC beginning with the 5th page onward. For example,
 - a) A 5-page paper with less than one full column of references = \$200 OPC.
 - b) A 6-page paper with less than one full column of references incurs \$400.00 in OPC.

DANILO ERRICOLO, *Editor-in-Chief*

University of Illinois at Chicago

Department of Electrical and Computer Engineering
Chicago, IL 60607 USA

Danilo Erricolo (S'97–M'99–SM'03–F'16) received the Laurea degree of Doctor (*summa cum laude*) in electronics engineering from the Politecnico di Milano, Milan, Italy, in 1993 and the Ph.D. degree in electrical engineering and computer science from the University of Illinois at Chicago (UIC), Chicago, Illinois, USA, in 1998.

He is a Professor in the Department of Electrical and Computer Engineering, UIC, the Director of the Andrew Electromagnetics Laboratory, an adjunct Professor of Bioengineering and in 2017 he was nominated a University of Illinois Scholar. During summer 2009, he was an Air Force Faculty Fellow at the Air Force Research Laboratory, Wright-Patterson Air Force Base, Dayton, Ohio, USA. He has authored or coauthored more than 250 publications in refereed journals and international conferences. He has served as Associate Editor of the IEEE ANTENNAS AND WIRELESS PROPAGATION LETTERS (2002–2014), the IEEE TRANSACTIONS ON ANTENNAS AND PROPAGATION (2013–2016) and *Radio Science* (2014–2016). In 2006, he was the Guest Editor of the Special Issues on RF Effects on Digital Systems of the *Electromagnetics Journal*,

and in 2012 he was the Lead Guest Editor of the Special Issue on Propagation Models and Inversion Approaches for Subsurface and Through Wall Imaging, of the *International Journal of Antennas and Propagation*. His research interests are primarily in the areas of electromagnetic propagation and scattering, high-frequency techniques, wireless communications, electromagnetic compatibility, the computation of special functions, and magnetic resonance imaging.

Dr. Erricolo is a Fellow of IEEE, a member of Eta Kappa Nu and was elected a Full Member of the U.S. National Committee (USNC) of the International Union of Radio Science (URSI) Commissions B, C, and E. He served as Chair (2009–2011), Vice Chair (2006–2008) and Secretary (2004–2005) of the USNC-URSI Commission E on Electromagnetic Environment and Interference. Between 2009 and 2014, he served as Chair of the USNC-URSI Ernest K. Smith Student Paper Competition. He also served as Vice-Chair of the Local Organizing Committee of the XXIX URSI General Assembly, held in Chicago, IL, USA in August 2008. He served as Member at Large of USNC-URSI (2012–2017), a committee of the US National Academies. He was the General Chairman of the 2012 IEEE International Symposium on Antennas and Propagation and USNC-URSI National Radio Science Meeting, held in Chicago, IL, USA in July 2012. Between 2011 and 2016, he was Chair of the Chicago Joint Chapter of the IEEE Antennas and Propagation Society (AP-S) and Microwave Theory and Techniques Society (MTT). He served on the IEEE AP-S Future Symposia Committee (2005–2017) and on the IEEE AP-S/USNC-URSI Joint Meetings Committee (2006–2017 as a USNC-URSI representative). He was an Elected Member of the Administrative Committee of the IEEE AP-S (2012–2014) and served as Chair of the Distinguished Lecturer Program of the IEEE AP-S (2015–2016). He has served on more than 40 conference technical program committees, chaired over 60 conference sessions, and organized more than 20 special sessions at international scientific conferences.
